

Managing your fleet got easier™

Small business owners have an endless list of things to manage. Our **BlackBox GPS** team works hard to minimize that stress for you. Fleet managers can significantly improve performance by using telematics to track and monitor their assets and allowing direct communication with your mobile workforce.

By combining our online, easy-to-use GPS fleet and asset tracking application with a range of robust devices, **BlackBox GPS** solutions deliver real-time visibility of your mobile assets - resulting in better communication, improved productivity, reduction of unauthorized use, and increased recovery of stolen assets.

With access to critical data from a desktop, mobile device or through your own application, we provide fleet managers with all the tracking information needed to facilitate effective management of your fixed and mobile assets.

TYPICAL PAYBACK IN 2-6 MONTHS

Improve Productivity and Customer Service

Know where your drivers are and communicate directly with them to effectively meet service level agreements using our dependable solution that lets dispatchers optimize routes and send turn-by-turn directions either by email or to a Garmin® unit.

Reduce Fuel Costs

Better manage fuel budgets by reducing miles driven, speed and idle time. Studies have shown that one hour of idle time wastes the equivalent of fuel used while driving 55 miles per hour for 25 miles.

Reduce Maintenance Costs

Track mileage, elapsed time or engine hours to know precisely when vehicles are due for maintenance. Monitor hard braking and hard acceleration to help reduce wear and tear on the vehicles.

Reduce Labor Costs

With access to near real-time data, you can monitor driver activity such as daily departure times, validate time cards and billing, monitor idle times and end-of-day signals.

Protect Valuable Assets

Guard against theft, misplacement and unauthorized use of expensive equipment or vehicles and locate assets should they be stolen.

Reduce Risk, Improve Safety

Nearly 90% of road accidents are caused by human error according to the International Organization for Road Accident Prevention. With access to near real-time data, receive alerts about aggressive driving and speeding and note real-time traffic and weather conditions. Use the data to establish safety standards and policies that reduce driver errors.

Our team pulls together the best resources available in the U.S. GPS tracking marketplace to offer a broad range of GPS based asset tracking devices, extensive cellular coverage and the latest mapping features in a no-nonsense, easy-to-use tracking system.

- User training – online demos and searchable web manuals
- Dashboard view of asset and vehicle data that can be sorted by key performance indicators
- Utilizes Google Maps™ for comprehensive mapping features
- Real-time alerts to isolate driving behaviors and idling conditions
- Real-time weather and traffic conditions for each vehicle location
- User/Group access and other Management controls
- User-configurable reporting
- Analytics for intelligent decision making
- Access your data from anywhere through our secure standards based API
- Plan and optimize your delivery route and upload it to a connected Garmin® PND
- And much more...

We proactively monitor the state and utilization of devices for you and we take care of firmware and software updates so you can concentrate on managing your fleet. Select **BlackBox GPS™ Live**, **BlackBox GPS™ Fleet Manager** or **BlackBox GPS™ Fleet Manager Pro** to meet your individualized needs.

According to a survey performed by the Aberdeen Group, GPS vehicle tracking systems have helped companies reduce fuel costs by 13.2% on average, and when implementing fleet tracking, companies often realize a 23% increase in the total number of service calls completed per day per technician.
